EP 375527 A

Designated States (Regional): AT BE CH DE ES FR GB GR IT LI LU NL SE

Abstract (Basic): EP 375527 A

1-Aryl-2-azetidinones of formula (I) are new; R1 and R2 = F, Cl, Br, I, CF3, COOR5, CN, CONHR5 or COR5; R5 = alkyl or aryl; R3 = F, Cl, Br, I, OCOR6, OSO2R6, OP(OR6)2 or S(R6)2+; R6 = alkyl; perfluoroalkyl or aryl; R4 = H, alkyl COOR7, CONHR7, NO2, CF3, SO2R7, (CH2)nOR7 or OR7; R7 = H, alkyl or aryl; n = 1-18.

Pref. R1 = F or Cl; R2 = F, Cl or Br; R3 = F, Cl Br or mesyloxy, with CH2R3 in the ortho position; R4 = H.

USE - (I) are irreversible inhibitors of serine elastases, esp. leucocytic and pancreatic elastases. They may be used to treat inflammatory and degenerative disorders, e.g. emphysema, bronchitis, arthritis, rheumatic fever, skin ageing, periodontosis, gingivitis, atherosclerosis, glomerulonephritis, respiratory distress syndrome, septic shock, Crohn's disease, gout and pancreatitis.

Dwg.0/0

Abstract (Equivalent): US 5030628 A

N-Aryl-azetidinones of formula (I) are new. In (I) R1 and R2 = F, Br, Cl or I, CF3, COOR5, CN, CONHR5 or COR5 (R5 = alkyl or aryl), R3 = Cl, Br, I, OCOR6, OSO2R6, OPO(R6)2 or S(R6)2X (R6 = alkyl, perfluoroalkyl, or aryl, X = halogen); R4 = H, alkyl, COOR7, CONHR7, NO2, CF3, CN, SO2R7, (CH2)OR7 or OR7 (R7 = H, alkyl or aryl; n = 1-18).

A typical cpd. is N-(tert.butyl-2-dimethylsilyloxy-methyl-phenyl)-3-bromo-3-fluoro-2-azetidinone. (I) may be prepd. from (I; R3 = OH) by reacting it with a suitable reagent to introduce an R3 gp.

USE - As serine elastase inhibitors, useful in treating pulmonary emphysema, bronchial inflammation, rheumatoid and infections, arthritis, rheumatic fever, cutaneous aging, periodontitis, gingivitis, arterial sclerosis, glomerulonephritis; respiratory distress syndrome, septic shock, Crohns disease, gout and pancreatitis.
